

models.customer.Corporate  
Customer.canPlaceOrder

models.customer.PrivateCustomer.can  
PlaceOrder

models.customer.Customer.view  
Balance

```
graph LR; A[models.customer.CorporateCustomer.canPlaceOrder] --> C[models.customer.Customer.viewBalance]; B[models.customer.PrivateCustomer.canPlaceOrder] --> C;
```

The diagram illustrates a class hierarchy where two subclasses, CorporateCustomer and PrivateCustomer, inherit from a base class Customer. Both subclasses have a method named canPlaceOrder. The base class Customer has a method named viewBalance. Arrows indicate that the canPlaceOrder method is inherited from the base class Customer to both CorporateCustomer and PrivateCustomer.
